

## GPS Fleet Management

The MARCUS® GPS Fleet Management System from Corpo-Track Systems is designed for service and distribution business who want an easy-to-use, cost effective, scalable solution to manage their fleet. There is no software to buy or install; customers can simply log in to the password protected CTS website for quick, 24/7 access to real-time information and management of their fleet from any web-enabled device.

### The CTS Advantage:

- 2-way dispatch and messaging application
- Vehicle routing and driving directions
- Vehicle maintenance report
- 12 real-time alerts
- Automated email report delivery
- 2 minute updates are standard
- 90 days of historical data archived
- No software to buy, or map controls to download
- One monthly service bill from Discrete Wireless (No additional fees from wireless carriers)

CTS customers universally experience reduced costs and increased overall operational efficiencies. Our customers experience dramatic decreases in fuel usage, speeding, personal use of vehicles and overtime. Combine this with significant increases in driver productivity and customer service, and you've got a healthier bottom line.

### GPS Fleet Management Benefits:

- Increased driver productivity
- Real-time dispatch tool
- Decreased overtime
- Reduced fuel expenses
- Improved customer service
- Reduced response time
- More accurate billing
- Validation of service calls
- Benefits of virtual time-clock
- Lower insurance costs (5-15%)
- Decreased driver speeding

These benefits explain why CTS Fleet Management products and services are currently used by over 5000 companies in The United States and Canada. Key industries include HVAC, plumbing, construction, transit and distribution. And, we are proud to have leading businesses such as Recall, ServiceMaster, Aaron Rents, and Bright House Networks as our customers.

## Mapping and Routing

CTS gives you the easiest way to access visual maps of your fleets. Our motto is true: your fleet really is one click away, 24 hours a day.

### Mapping

*View the location of a single vehicle or fleets and immediately see their status (moving, stopped and stop duration). Quickly find addresses and dispatch the closest vehicles.*

- Hybrid mapping powered by Google™ with real-time traffic
- Send jobs and messages to mobiles by clicking vehicle icon
- Look up addresses, user-defined locations and zones
- Layer user-defined zones and locations on top of a map display
- “Ping” vehicle for position updates if needed between set intervals

### Routing

*Managers and dispatchers can create and save multi-point routes and directions. Managers can then easily view and edit driving directions and send them directly to the driver.*

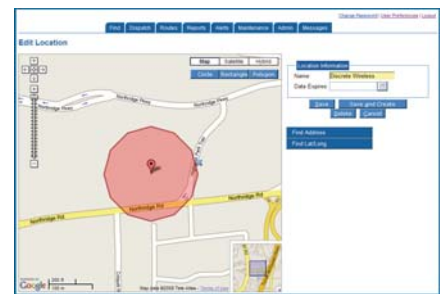

- Use a vehicle's current location, a previously saved location or generate a new location using route points
- Organize route points in the order needed
- View the route and directions
- Create, name and save any number of customized routes
- Send driving directions directly to the drivers using the additional Marcus® Dispatch application

### Alerts

*Provides instantaneous email notification when user-definable violations occur. View easy-to-read summaries of exceptions without sorting through other mail.*

- |                             |  |
|-----------------------------|--|
| — Speeding                  | — Sensors (Idle, cargo door, lift, etc.) |
| — Odd hours of operation    | — Extended Stop                          |
| — First movement of the day | — No movement                            |
| — Arrival at location       | — Enter / exit zip code                  |
| — Departure from location   | — Excessive Idling                       |
| — Enter and exit zones      |  |

Messaging, Maintenance, and Administration

### 2-way Messaging

The powerful 2-way messaging system provides all of the necessary tools to quickly create and send text messages to all of your drivers, and they can respond directly back.

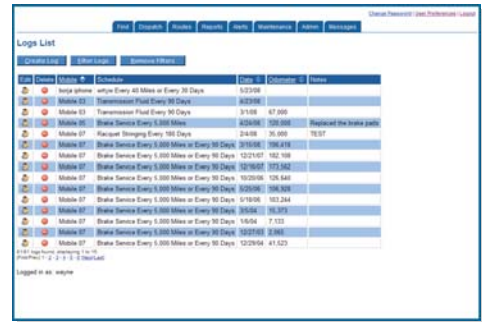

- Send messages to connected in-vehicle device
- Manage all messages from a single screen
- Messages are sorted by driver for easy management
- Quickly reply to or delete messages with a single mouse click
- Easily create route directions and email them to your drivers
- Has both canned and free form send messages

### Vehicle Maintenance

Set maintenance points for each vehicle or fleet of vehicles. Type of service and duration with notifications that can be emailed when maintenance points are reached.

- Set maintenance points for each vehicle or the entire fleet
- Configure service types and duration in actual miles or elapsed time
- User defined maintenance lists such as oil changes, tire rotation, tune-ups, etc.
- Maintenance alerts can be emailed directly to your computer, handheld device, cell phone or pager

### Administration

Administrators can easily view and modify all aspects of their users, drivers and managers from a single screen. Create and manage customizable zones and locations with a few simple keystrokes.

- Zones and locations are resizable directly on the map
- Define / edit automated email report delivery
- Define / edit driver assignment to vehicle name
- Define / edit saved locations
- Define / edit zones
- Define user groups by fleet
- Define / edit vehicle names
- Define / edit fleets
- User interface preference selection
- Password management

The MARCUS® GPS Fleet Management System is known as the most user-friendly, intuitive, GPS tracking system in the fleet management industry. Continual improvement based upon customer input has resulted in balancing an affordable, extremely full-featured application with user simplicity to maximize our customers' value of time and resources.

Improve efficiency and boost profitability with the MARCUS® GPS Fleet Management System from CTS.
